### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 to 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese patent 5-202447 cited in IDS dated 3-23-04.

3. A non-heat treated seamless steel tube example 11 in the table on page 4 of JP'447 meets the composition recited by claims 1 to 4 except contains 0.26%C which is slightly outside the claimed C range of 0.10 to 0.25%. Since applicant has not demonstrated criticality of the C range (e.g. by comparative test data), then it would appear that a composition with 0.25%C vs. a composition with slightly more C (say 0.26%) would depict a mere difference in the proportion of element without any attendant unexpected results which would not patentably distinguish claims over prior art.

4. Moreover, when calculated, prior art example 11, has a Ceq of 0.72 which is within applicant's range of 0.6 to 0.85.

5. Also since JP'447 steel does not disclose oxygen, then it can be presumed not present or at very low impurity levels which would be closely within the claimed O range not more than 0.003% .
